

SOFTWARE QUALITY ASSURANCE MANAGEMENT SYSTEM

Abstract of the Disclosure

5 A method for auditing an activity, which is implemented at an organization, documents an activity to be audited within a database. The database is included in a network accessible by the organization and an auditing entity. The activity is audited. A determination is made if the audited activity produces a finding. If the audited activity produces the finding, the finding is documented within the database. A notification of the finding is automatically transmitted, via the network, from the auditing entity to the organization.
